Do you...

- ▶ write scientific documents?
- ▶ typeset math notation?
- ▶ make presentation slides?
- ▶ make conference posters?
- ▶ cite many references?
- ▶ (plan to) write a dissertation?
- ▶ give MC exams?
- ▶ like aesthetic document design?

Motivation &
Background

How-to: Some
tricks

Resources

One more thing

Or are you...

- ▶ tired of MS Word?
- ▶ running into trouble with large-ish Word documents?

Then you may want to look into L^AT_EX.

Because L^AT_EX lets you do these things...

- ▶ more easily,
- ▶ more aesthetically, and
- ▶ more naturally

—with a one-stop setup.

But: high learning curve (depending on your computing background).

A mechanical typesetter for you. This means:

Your content

+

code

via \LaTeX = Output.

Explaining Concessions in GATT/WTO Trade Disputes: The Role of Institutional Environments

Johannes Karreth

Department of Political Science

University of Colorado Boulder

johannes.karreth@colorado.edu

This draft: December 2012

Abstract

Why do states sometimes make concessions in trade disputes, while other disputes do not see any concessions made at all? This paper provides an explanation for variation in the outcomes of trade disputes within the dispute settlement system of the General Agreement on Tariffs and Trade/World Trade Organization (GATT/WTO). The answer reflects on a fundamental debate in international relations: do international institutions affect state behavior, and if so, how? I

For dissertations or theses...

My argument

RTAs and concessions

Defendants' participation in regional trade agreements creates incentives for defendants to acquiesce in GATT/WTO trade disputes.

Incentives are present if a state participates in at least one formalized RTA.

Hypothesis

Defendants in GATT/WTO disputes are more likely to make concessions when they are embedded in one or more RTAs.

```

- ▶ Table of contents
- ▶ Links within documents
- ▶ Formatting

Typesetting math

Inline:

```
$y = \alpha + \beta x + \epsilon$  
 $y = \alpha + \beta x + \epsilon$ 
```

As equations:

```
\begin{equation}  
y = \alpha + \beta x + \epsilon  
\end{equation}
```

$$y = \alpha + \beta x + \epsilon \quad (1)$$

```
\begin{table}
\caption{My table}
\begin{tabular}{l | c || r }
\hline
1 & 2 & 3 \\
4 & 5 & 6 \\
7 & 8 & 9 \\
\hline
\end{tabular}
\end{table}
```

Tables

Use the `table` and `tabular` environments:

Table 1 : My table

1	2	3
4	5	6
7	8	9

Figures

Use the `includegraphics` command and the `figure` environment:

```
\begin{figure}
\includegraphics[scale = 0.75]{cu-logo.jpg}
\caption{My figure}
\end{figure}
```

Figures

Use the `includegraphics` command and the `figure` environment:

Figure 1 : My figure

River Treaty Database Codebook

Johannes Karreth

Last updated: June 6, 2013

About this document

This document (*rtd_treaty-codebook.pdf*) defines all variables in the River Treaty Database file:

```
./RT/TFDD/TFDD Summer 2013/TFDD_Jul_2012_Revised_Karreth.csv
```

That file is based on previous versions compiled by Jaroslav Tir and Doug Stinnett. Those versions were derived from the TFDD International Freshwater Treaties Database at <http://www.transboundarywaters.orst.edu/database/interfreshtreatdata.html>. The River Treaty Database is being revised in Summer 2013. Information from [http://www.transboundarywaters.orst.edu/database/Treaty%20Database%20Design%20\(with%20descriptions\).doc](http://www.transboundarywaters.orst.edu/database/Treaty%20Database%20Design%20(with%20descriptions).doc) was used to recover information on most variables.

This codebook defines variables at the treaty- and more finegrained levels of analysis. For data at the country and dyad year levels of analysis, see the document *rtd_cd-codebook.pdf*.

Other topics I didn't mention in depth

- ▶ **Bibliography** customization (e.g., `natbib`, `biblatex`)
